

CATCHING PREY & POLLUTION

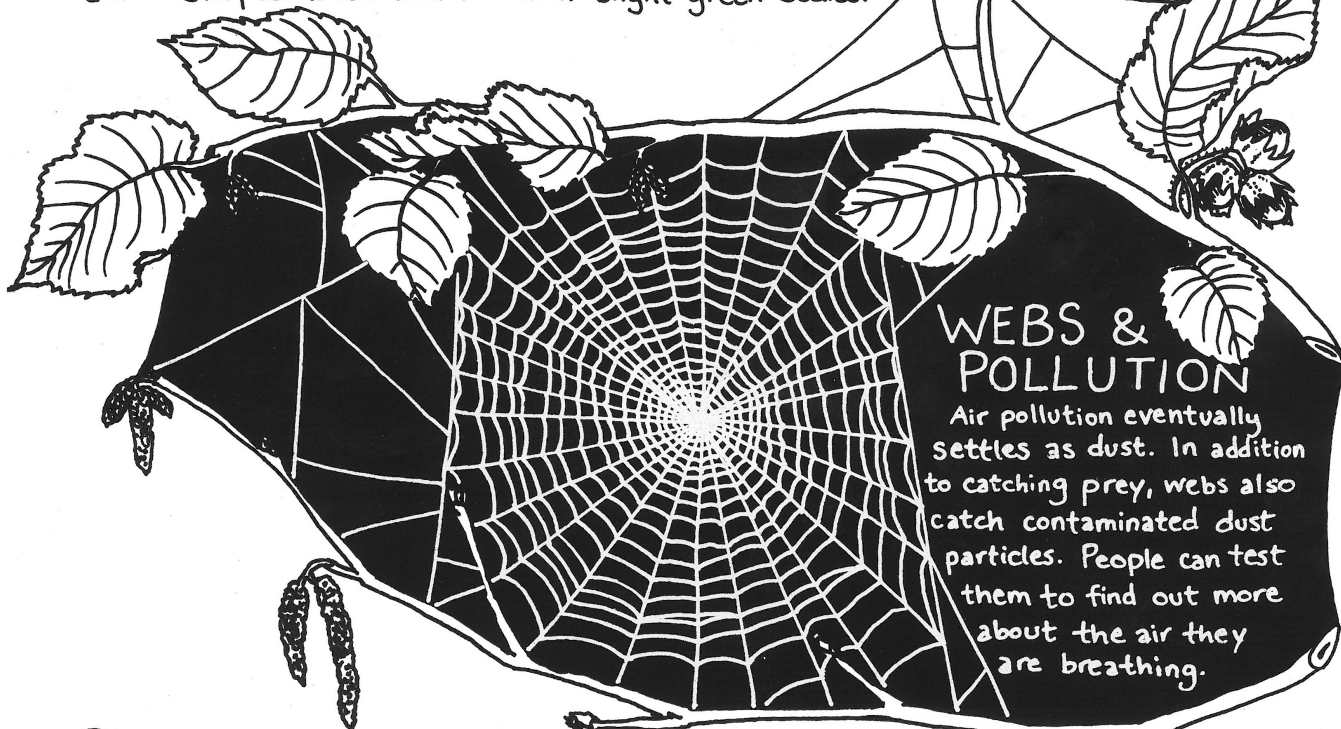

Mecynogea Lemniscata

BASILICA ORBWEAVERS:

Basilica orbweavers are both distinct and common, perfect for those who are new to identifying spiders. They are known for building intricate dome-shaped webs and for their bright green bodies.

Hazelnut, Corylus

WEBS & POLLUTION

Air pollution eventually settles as dust. In addition to catching prey, webs also catch contaminated dust particles. People can test them to find out more about the air they are breathing.

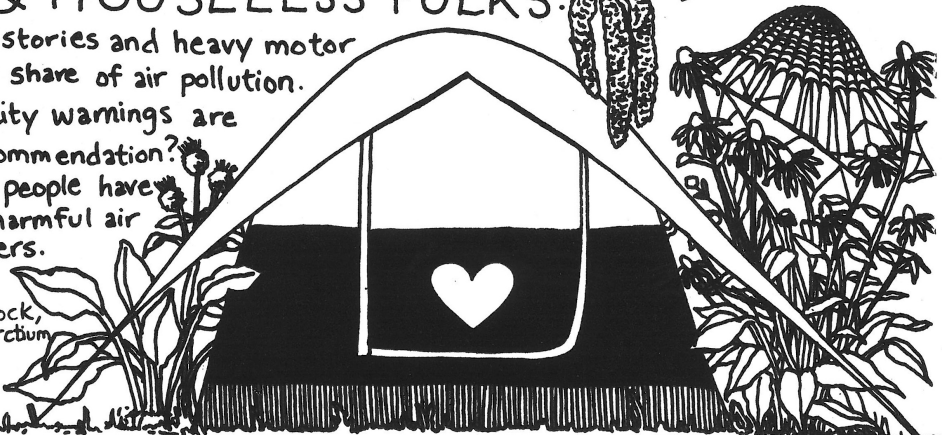

POLLUTION & HOUSELESS FOLKS:

Cities with industrial histories and heavy motor traffic come with their share of air pollution.

In urban areas air quality warnings are common place. The recommendation?

Stay inside. Houseless people have little protection from harmful air pollutants in city centers.

Burdock, Arctium

Purple coneflower, Echinacea
